

Digital Information Kiosks

Pioneering innovations has always been the cornerstone of all our endeavors at Mantri Developers, be it quality or services. We have continually strived to bring our customers the latest technology with an aim to make life simpler.

With this objective in mind, Mantri Square, India's largest shopping mall has introduced Interactive Touch Panel Digital Kiosks for its customers. Located at convenient locations across the mall, these Kiosks from Moveo allow users to interact with the system and gather information about the mall. Customers can browse through the mall directory, access the mall map, share feedback on the mall, simply participate in a survey or learn more about the upcoming events in the mall, all by just a touch of their finger. For example, a customer on the ground floor using the Mantri Square Information Kiosk can view the food court on the third floor of the mall, select the outlet he would like to dine at and can easily navigate his way to the restaurant by accessing the mall map and simply touching a few links and icons.

As compared to the static directory board used regularly across malls, these digital kiosks are an extremely user-friendly enquiry system that can be easily used by all age groups across demographics. They can be easily updated, and can be customized to suit the language of the user. The system can be localized to both Kannada and English, thereby further enhancing the user experience.

Adding to the list of the many Firsts that Mantri has bought to its customers, are these interactive Digital Information kiosks that have been previously only seen at airports, banks and hotels.
